

SOLAR POWERED DOLPHIN LIGHTS

Model Number: FOBSLINFLDOP

Instructions:

- Inflate using valve, do not over-inflate.
- Automatically charges in sunlight.
- Once charged, LED light automatically illuminates in darkness.
- Deflate and fold to store.

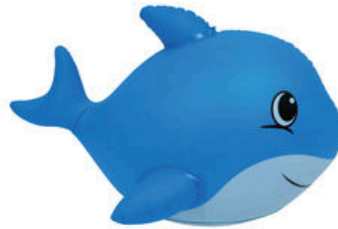

How to use:

- Fully inflate the dolphin before charging.
- After inflating the dolphin, place in direct sunlight. It will charge automatically.
- The dolphin will automatically light up at night. Lasts up to 6-8 hours after full charge.

Please note:

- For best results: Fully inflate the dolphin and place in bright sunlight for 8-10 hours.
- Do not over-inflate to attempt to remove wrinkles. Wrinkles fade after a day.
- In cold weather you may need to re-inflate the dolphin.

In order to protect the battery, it is recommended to recharge after a long period of non-use.

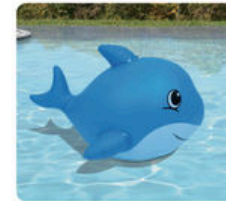

Steps:

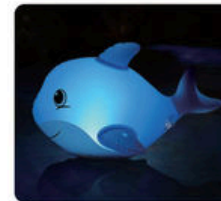

1. Open the inflation nozzle and fully inflate using a pump.

2. Close the valve and push the valve in.

3. Position the dolphin in direct sun during the day for at least 8-10 hours.

4. The dolphin glows automatically when it gets dark.

5. When not used, insert the white tube into the nozzle to deflate.

6. Press to deflate completely and store it in its original box.
