

HY-COLOR SUCTION POOL CLEANERS

Suction cleaners automate the task of manually vacuuming debris from the bottom of the pool.

Suction cleaners are powered by the pool's pump and therefore work when the pump is running. They have a hose connected to the vacuum plate in the skimmer box, and the debris is collected in the debris basket in the skimmer box.

The PTS branded Pool Blade is an affordable suction cleaner designed for in-ground pools. Constructed from UV and chemical resistant materials it will provide years of faithful service.

- Only has one moving part to deliver reliable, trouble-free service
- Uses a hammer mechanism for suction and movement.
- Adjustable valves to control cleaning speed
- Runs on existing pump and filter systems
- Easy to install

(It is not recommended for vinyl or above ground pools).

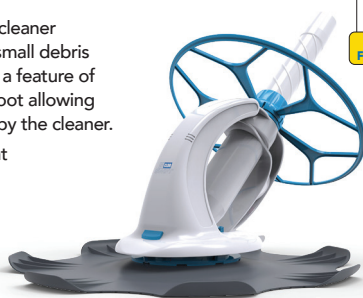

HY-COLOR SWIFT

Hy-Clor Swift is a diaphragm suction cleaner designed for cleaning dust / silt and small debris from the floor of your pool. Swift has a feature of additional suction ports on the flexi foot allowing any stirred up debris to be captured by the cleaner.

- Designed to be reliable and efficient
- Diaphragmatic operation is quiet relative to a hammer mechanism
- Easy to install
- Includes 10m of hose

(It is not recommended for vinyl or above ground pools).

HY-COLOR GLIDE

With its turbine-based system and intelligent gear mechanism, the Glide effortlessly maneuvers through tight spots, ensuring a thorough clean. Thanks to its built-in swivel, hose tangling is a thing of the past, making your pool cleaning experience hassle-free. The Glide handles small to medium-sized debris, keeping your pool clean and inviting.

- Turbine mechanism
- Suits all pool types and shapes up to 9.5m, including fiberglass & vinyl
- Able to turn out of tight spots helping prevent the cleaner from getting stuck
- Anti swift swivel ensures full pool coverage by keeping hoses twist and kink free

What type of HY-CLOR Pool Hoses do I use?

The **PTS BLADE** Pool Cleaner (and discontinued Pulse) uses Hy-Clor **UNIVERSAL** Hose's

- It Comes with 1 x Female to Female UNIVERSAL Hose.
- Uses Segmented Hoses.

The **Hy-Clor SWIFT** Pool Cleaner uses Hy-Clor **APC** Hose's

- It Comes with 1 x Female to Female and 9 x Male to female APC Hoses.
- Uses Segmented Hoses.

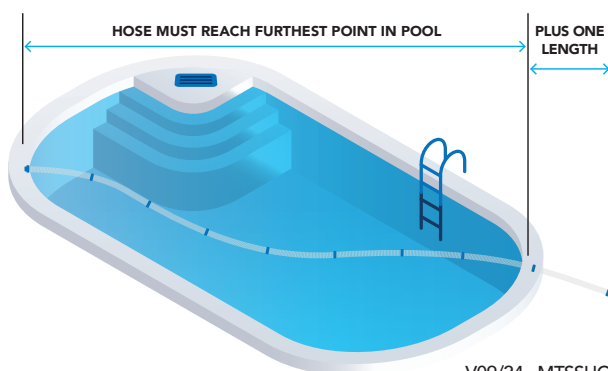

The **Hy-Clor GLIDE** Pool Cleaner uses Hy-Clor **APC** Hose's

- It Comes with 1 x Female to Female and 14 x Male to female APC Hoses.
- Also comes with 1x Leader Hose (390mm used to connect directly to the pool cleaner)
- Uses Segmented Hoses.

PRODUCT	LENGTH	DESCRIPTION	ITEM NO#
 APC – Automatic Pool Cleaner Segmented Hose	1m	Male End = Tapered 36mm to fit into 38mm	0293225 (Grey)
		Female End = fits 38mm	
 UNI – Universal Pool Cleaner Segmented Hose	1m	Male End = 40 mm tapered to fit 42 mm	0293224 (Blue/White)
		Female End = fits 42mm	0293222 (White)
 Complete Vacuum Hose	8m	Designed for Vacuum Heads. Not for suction cleaners	293227
	10m		293228
	13m		0293230

Why use HY-CLOR segmented hoses instead of a complete hose for a Pool Cleaner?

- Utilising segmented hoses enables you to achieve the perfect hose length required for your pool cleaner. If the hose is too short your cleaner won't reach parts of your pool and if the hose is too long, it can tangle, reducing the hose's lifespan and causing the cleaner to stick.
- Segmented hoses provide improved bend radius (flexibility) per hose, resulting in fewer challenges for your cleaner when maneuvering through corners or tight spots.
- In case a section becomes damaged, replacing it is more cost-effective than buying an entirely new hose set
- Once taken out of the pool, the segmented hoses can be conveniently stored in 1-meter sections. This prevents coiling and the formation of any memory in the hoses.
